

comes back out. So, there is a...it's a state of bi-location, actually. So, it is located both simultaneously in both places, so you would have...if you were in a system that does this, if you're in the fold, you would have a part of yourself fully aware here in this manifest system, but it would be in its perfected state, its most perfect state. And you would have a part of you also continually in the inner domains of the Hall of Records and all of that. It's really neat. This is natural. This is like a natural, how natural ascension works.

It's also at the point where if there's anything that is falling in the system, there would be a cycle while this fold is out, before the bi-location one. Now, the bi-location part that comes back out is called the Ma Sha Yah. This stage is called the Ma Sha phase. And at the end of it, that's the second phase of the KaLA Krysta cycle. At the end of that you get the Ma Sha Ya Fold and the return of the Ma Sha Yah. The Ma Sha Yah is that bi-location body where there is a manifest version of the system that just went in, comes back out in its pristine condition, and the other one stays in here, and the Ma Sha Yah can go back and forth... if it's a person, they can go back and forth between the Hall of Records. And that means they can enter the Hall of Records and go into other vectors, if they want to. So, it's like the first key to freedom is being there.

Now, when we go into this stage, this has to do... there's a whole series of ones. They were going to work on these more in the diagrams. They were starting but because of what is happening right now. We'll get to those later. But there is a bit of an offset in how the cycles run. This is the cycle that Urtha, which is in M31... so M31 Andromeda Galaxy Aquinos is going... these are the time frames associated with it, and with Sha-La 3, which is of the Eiradonis level. Alright?

Now, the host has to catch up with it, and we all started together, but Earth and AshaLA, those two bodies, have a period of time where they have to synchronize their axis alignment, so they can pick it up. They have to hit a certain stage in their stages to pick up this, and we're going to look at those not in this workshop, because they had to jump ahead to other stuff that you're going to see on the maps.

So, we'll see those later. But this is the cycle we're all in, and there's just a little bit of an offset here, where we've done this together. Urtha and the M31 system, the Sha-La 3 system—the AquaA'elle System with Sha-La 3 in it, and Earth through the Aquafereion Shield, and AshaLA, have completed this together.

Now, the higher...let's call them the higher frequency systems, which would be the M31 and the Sha-La system, will just continue their natural...because they are on a natural axis remember, so they don't have all these weird shifts of magnetic fields and axes they have to go through. They will be going through this period here, between May of 2008 it starts, through 2047, and at that point is when we said for a long time Urtha Starfires. This is actually the first stage of Starfire. This is the first Starfire point, and that's where the M31 system pulls into the Ma Sha Yah Fold, where it pulls all the way in and then does the replication, but comes back out, so it is still there to hold the host. The host is the Ma Sha Yah Body of the M31 and AquaA'elle system merged.

So, then there's this next stage called stage three. It's called the HaRA Krysta Cycle. It goes from 2050 to 2225 AD. This is a long time. But between the end of that one and 2007 is that 223 year host that we talked about. After that, this galaxy goes into quarantine. Whatever is still in it will stay in it. It will go into a slow black hole fall, but it cannot get out. The ascension gates close, period, across the board. And whether anybody doesn't like what we've been teaching all along or not, it doesn't change that fact. And it's sad that there's a lot of people out there who really do care about ascension, but are being misdirected by those teaching the Daisy of Death paradigm and other things like it. Because there is 223 years left.
